

Complete Summary

TITLE

Aged care: percentage of patients admitted to geriatric medicine or geriatric rehabilitation unit for whom there is documented objective assessment of physical function on admission and at least once more during the inpatient stay, during the 6 month time period.

SOURCE(S)

Does not apply to this measure

Brief Abstract

DESCRIPTION

This measure is used to assess the percentage of patients admitted to a geriatric medicine or geriatric rehabilitation unit for whom there is documented objective assessment of physical function on admission and at least once more during the inpatient stay, during the 6 month time period.

RATIONALE

Patients who are admitted to a geriatric medicine or geriatric rehabilitation unit must have a documented objective assessment of physical function. Comprehensive functional assessment and reassessment are vital to planning appropriate treatment programs and should be done at least twice during an inpatient stay.

Although this indicator currently only applies to patients admitted to a geriatric medicine or geriatric rehabilitation unit, the assessment of physical function is an appropriate practice for all older patients, and there will be a move to expand this indicator to general units in the future.

PRIMARY CLINICAL COMPONENT

Geriatrics; physical function assessment; functional independence measure (FIM); Barthels Index

DENOMINATOR DESCRIPTION

Total number of patients admitted to a geriatric medicine or geriatric rehabilitation unit, during the 6 month time period

NUMERATOR DESCRIPTION

Total number of patients admitted to a geriatric medicine or geriatric rehabilitation unit for whom there is documented objective assessment of physical function* on admission and at least once more during the inpatient stay, during the 6 month time period

**Documented assessment of physical function* refers to an objectively written assessment of physical function in the patient record, the minimum requirement being assessment of mobility, gait and continence. Assessments (and reassessments) of physical function should continue to be performed during the inpatient stay using a standardized assessment instrument e.g., functional independence measure (FIM), Barthels Index.

Evidence Supporting the Measure

EVIDENCE SUPPORTING THE CRITERION OF QUALITY

- A formal consensus procedure involving experts in relevant clinical, methodological, and organizational sciences

Evidence Supporting Need for the Measure

NEED FOR THE MEASURE

Use of this measure to improve performance
Variation in quality for the performance measured

DEVELOPER

Australian Council on Healthcare Standards

FUNDING SOURCE(S)

Funding is direct Australian Council on Healthcare Standards (ACHS) funding sourced through our membership. ACHS does not receive external funding from the government or other sources.

COMPOSITION OF THE GROUP THAT DEVELOPED THE MEASURE

Our terms of reference dictate the composition of the working parties that develop our indicators and include the following:

- Two Clinicians -- nominated by the relevant specialty college/association/society, one nominated to be the chair of the working party
- Private Hospital Representative -- nominated by the Australian Private Hospital Association
- Consumer Representative -- nominated by the Consumer Health Forum of Australia
- Coding Representative -- nominated by the National Centre for Clinical classification on Health
- Quality Health New Zealand, nominated by QHNZ (if applicable)
- Epidemiological/Clinical Research Representative, Director of Health Services Research Group, University of Newcastle
- Australian Council on Healthcare Standards (ACHS) Representatives -- Clinical Director, Coordinator, Administrative Assistant
- Other Expert Stakeholders, as required

FINANCIAL DISCLOSURES/OTHER POTENTIAL CONFLICTS OF INTEREST

None

ADAPTATION
